

Energy transition is worthwhile

Let's work together to make your space future-proof!

Solar energy is the electricity of the future: climate-friendly, environmentally compatible and economical. The expansion of renewable energy sources is one of the most important tasks of the present day. Together with you, we are contributing to this!

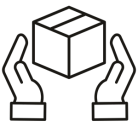

Maximum cost-effectiveness

Remuneration for reserving space until construction begins and attractive remuneration for space utilisation.

Planning reliability & transparency

Long-term contract duration, freedom of use until construction begins, and regular communication.

all-inclusive package

Planning, development, construction and operation, dismantling obligation after contract end.

Investment in sustainability

Contribution to the energy transition, soil restoration, ongoing green space maintenance.

Long-term partnership

Collaboration on equal terms, short communication channels, high transparency.

Customised solutions

Project team with personal contact person.

aream – your strong partner

Since 2005, aream has been actively involved in the development of photovoltaic and wind energy projects, as well as in the construction and commissioning of the plants. This means you benefit from over 20 years of experience in the field of renewable energies. A trusting relationship with you is our top priority.

Everything from one source
